An ion ( $e^-$ ,  $e^+$ ,  $n^-$ ,  $n^+$ ) is an atom or molecule that has a non-zero net electrical charge. Since the charge of the electron (considered "negative" by convention) is equal and opposite to that of the proton (considered "positive" by convention), the net charge of an ion is non-zero due to its total number of electrons being unequal to its ...

### **Ion - Wikipedia**

Genetic engineering is the direct manipulation of an organism's genome using certain biotechnology techniques that have only existed since the 1970s. Human directed genetic manipulation was occurring much earlier, beginning with the domestication of plants and animals through artificial selection.

Bacteria and archaea possess a range of defense mechanisms to combat plasmids and viral infections. Unique among these are the CRISPR-Cas (clustered regularly interspaced short palindromic repeats-CRISPR associated) systems, which provide adaptive immunity against foreign nucleic acids.

Controllable surface modification of nickel–nitrogen (Ni–N) bridge sites is prepared via a simplified vapor-assisted treatment approach. The N modified Ni with distorted structures and suitable N coverage level significantly promotes hydrogen evolution reaction in alkaline conditions.
