point [11]. The unique interior point corresponds to the canonical divisor of the ambient toric variety. Our next task is to present type IIB Calabi-Yau  $X_{\sim}$ , which is the mirror partner of  $X$ .

### **Geometry and N = 2 Exceptional Gauge Theories**

We describe the geometry of all type II common sector backgrounds with two supersymmetries. In particular, we determine the spacetime geometry of those supersymmetric backgrounds for which each copy of the Killing spinor equations admits a Killing spinor. The stability subgroups of both Killing spinors are  $\text{Spin}(7) \times \mathbb{R}^8$ ,  $\text{SU}(4) \times \mathbb{R}^8$  and  $G_2 \times \mathbb{R}^8$  for IIB backgrounds, and  $\text{Spin}(7)$ ,  $\text{SU}(4)$  and  $G_2 \times \mathbb{R}^8$  ...

The geometry of  $N=2$  supergravity is related to the variations of Hodge structure for formal Calabi-Yau spaces. All known results in this branch of algebraic geometry are easily recovered from supersymmetry arguments. This identification has a physical meaning for a type IIB superstring
